## **Education and Degrees**

August 2000 – July 2004. Postdoctoral Research Fellowship in Cardiology, Department of Molecular Genetics, University of Texas Southwestern Medical Center, Dallas, TX.

June 2000 – Doctor of Philosophy in Kinesiology, University of Maryland, College Park, MD.

May 1993 - Masters in Public Management, University of Maryland, College Park, MD.

May 1990 - Bachelor of Science in Nutritional Sciences, University of Maryland, College Park, MD.

## **Personal Statement**

I recently transitioned from my faculty position at the University of Illinois, where I had been for 19 years, to become the Director of the School of Nutritional Sciences and Wellness at the University of Arizona in August, 2023. My current research is focused on developing novel strategies to improve the health and quality of life of patients with chronic kidney disease (CKD). CKD patients suffer from a myriad of co-morbidities that adversely impact their health and quality of life. While pharmacological therapies are often prioritized in their care, exercise and nutrition-related strategies receive less emphasis, despite tremendous potential benefits. I have developed two parallel lines of research focused on: A) increasing physical activity levels in patients with chronic kidney disease; and B) reducing cardiovascular disease risk in patients with renal failure, primarily through improved management of chronic volume overload and hypertension. These are two of the most challenging and clinically significant problems in Nephrology and should be prioritized in the rehabilitation plans for this critically ill patient population. To help facilitate this work, I recently founded the Global Renal Exercise (GREX) Network, an international group of over 400 researchers, clinicians, patient, and industry partners whose goal is improve the research base and implementation of lifestyle-related therapies across the spectrum of chronic kidney disease.
